PROFESSIONAL SUMMARY

MCA candidate with strong foundations in **Java** and **Object-Oriented Programming**. Experienced in designing and building full-stack applications, with knowledge of software engineering processes, design patterns, and Agile methodologies. Familiar with **Test-Driven Development** concepts and **multi-threading** in Java. Passionate about building reliable, scalable, and innovative software solutions and contributing to technology prototyping and product engineering.

EDUCATION

Master of Computer Application (MCA) Amity University Patna, India CGPA: 8.5/10	2024 – 2026
Bachelor of Computer Application (BCA) M.S. College Motihari, India Percentage: 80.40%	2019 – 2023

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, C, HTML5, CSS3, Python (Basic)
Frameworks & Libraries: React, Bootstrap, Tailwind CSS
Developer Tools: Git, GitHub, VS Code, Eclipse, JUnit (Unit Testing)
Database Technologies: MySQL, Database Design, Schema Optimization
Core Competencies: Data Structures & Algorithms, Object-Oriented Programming (OOPs), DBMS

EXPERIENCE

React Developer Intern OpeBo Industries Ltd	Jun 2024 – Aug 2024
- Developed reusable React components following OOP principles and optimized state management with JavaScript for seamless application functionality. - Applied Test-Driven Development concepts by writing unit tests to verify component behaviour and ensure code reliability before integration. - Documented component specifications and contributed to technical design discussions, conforming to team-defined engineering processes. - Collaborated with senior developers to implement pixel-perfect designs and a consistent user experience, using Git for version control.	

PROJECTS

N-Queens Visualizer Java, JavaScript, HTML, CSS, Data Structures & Algorithms	GitHub
- Built an interactive visualization prototype demonstrating backtracking algorithms for the N-Queens problem, optimizing rendering performance by 20% through efficient DOM manipulation. - Implemented a recursive backtracking algorithm in Java achieving 100% accuracy in finding all valid queen placements - demonstrating deep understanding of algorithmic design and complexity.	
Meal Finder Application Java, JavaScript, React, MySQL, CSS, HTML	GitHub
- Engineered a full-stack meal search prototype using React and MySQL, achieving 30% improvement in data retrieval efficiency through optimized database queries and indexing strategies — demonstrating end-to-end product implementation skills. - Designed and implemented a scalable MySQL database schema, applying OOP data modelling principles to manage 100+ recipes, ingredients, and user interactions efficiently.	

ACHIEVEMENTS & LEADERSHIP

- Secured 41st position among 500+ participants in Code Champ Programming Competition by optimizing code and reducing runtime complexity by 35% using advanced programming techniques.
- Top 5% Rank, Cyberanya Project Competition-recognized as the youngest participant; gained significant experience in competitive product development.
- Certificate of participation in HP Power Lab 2.0 (Nov 2025).

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Master DSA with Java Coding Blocks	July 2025
Agile Project Management HP Life Online Course	Dec 2025
TCS Youth Employability Program (YEP) Tata Consultancy Services	2023
